

# Epoxy-Shell Metallics

If you're looking to provide your customers with a dose of drama in any space, metallics may be the answer. Metallic pigments combined with our 100% solids Epoxy-Shell System create shiny, reflective floors that score big on looks and durability. Plus they contain almost no VOCs (and are SCAQMD approved) so they're environmentally friendly. Not to mention they are seamless and cure to a surface that is harder than concrete. Metallic pigments create depth and movement in the floor that replicates molten metal or even deep blue water. Use of multiple colors and special finishing techniques provide unlimited combinations for one-of-a-kind floors. Combined with our Poly-Shell topcoat, metallic floors are a great option for high traffic areas in commercial, retail or residential settings including hotel lobbies, salons and game rooms.

Create your own combinations for a custom look!
